Name (L	.ast, First):	Student ID:
	Assignment 5	
	METCS544A3A4_F2024	
2. For two	is assignment has no specific R programming questions, but you e R to plot and graph the data and calculate relevant statistic sur answering programming questions, please use Adobe Acrobat to o steps [See Appendix: Example Question and Answer]: a. Copy and paste your R code as text in the box provided (so the team can run your code); b. Screenshot your R console outputs, save them as a .PNG imate paste/insert them in the box provided. c. Show all work - credit will not be given for code without show action by including the screenshot of R console outputs. answer non-programming questions, please type or handwrite your array in the boxes. Show all work - credit will not be given for number without explanation in the space above the boxes. botal 60 pts = 57 + 3 Extra Credit pts]	mmaries. De edit the pdf file in the pdf file
•	Grading Rubric Each question is worth 3 points and will be graded as follows: Correct answer with work shown points: Incorrect answer but attempt shows some understanding incorrect answer but an attempt was made (work shown), or correct answer but an attempt was made (work shown) O points: Left blank or made little to no effort/work not shown	(work shown) ect answer without

(Copy and paste the link to your live Google doc in the box below)

Part I. Exploring Two Categorical Variables (33 pts)

1) **(12 pts)** The table shows the results of a poll asking adults whether they were looking forward to the Super Bowl game, looking forward to the commercials, or didn't plan to watch.

84			/
	Male	Female	Total
Game	279	200	479
Commercials	81	156	237
Won't Watch	132	160	292
Total	492	516	1008

	IOlai	492	210	1008	
a) Display the data with a s	ide-by-side bar	chart.			
b) Display the data with a s	segmented bar	graph (b	y making a	relative f	frequency table first).
c) Based on your investigat					e is an association
between a person's sex and	d their interest	in the Su	iper Bowl:	,	

2) **(9 pts)** A public opinion survey explored the relationship between age and support for increasing the minimum wage. The results are summarized in the two-way table below.

	Yes	No	No Opinion	Total
18 to 30	25	20	5	50
31 to 60	20	35	20	75
Over 60	55	15	5	75
Total	100	70	30	200

a) Give an example of a joint relative frequency and interpret it in context.
b) Give an example of a marginal relative frequency and interpret it in context.
c) Give an example of a conditional relative frequency and interpret it in context.

3) **(12 pts)** The table below shows the three most popular social media platforms and the distribution of the ages on those platforms. The data is based on MAU (monthly active users). A random sample of 100 active users from each platform was taken, and their age was recorded.

		Soc			
		Facebook	YouTube	WhatsApp	Total
	0 – 17	6	23	17	46
	18 – 26	28	40	18	86
Age Group	27 – 35	37	30	28	95
	36 – 49	23	5	17	45
	50 and older	6	2	20	28
		100	100	100	300

Create a mosaic plot of the data above. Show ALL work and calculations used to create the plot. Answer:

Part II. Exploring Two	Variable Data: Scatter	plots and Correlation (24 pts
------------------------	------------------------	-------------------------	--------

dormitory		e, and t	he wom	nen in th	he adjo	to date taller men. She measures herself, her ining rooms; then, she measures the next man inches):
Women	66	64	66	65	70	65
Men	72	68	70	68	71	65
a) Is there		planato	ry varia			nse variable in this setting? If so, tell which is
Answer:						
	a well-label	ed scatt	terplot (of these	data.	
Answer:						

of wome	on the scatterplot, describe the pattern, if any, in the relationship between the heights and the heights of the men they date.
Answer:	
	se another 70-inch-tall female who dated a 73-in-tall male were added to the data set. Id this influence $m{r}$?
Answer:	

2) From tax records, it is relatively easy to determine the amount of liquor consumed per capita and the number of cigarettes consumed per capita for each of the 10 provinces of Canada. These are plotted on a scatterplot and a high positive correlation is found. Which of the following is correct?
 (A) This implies that heavy smoking causes people to drink more. (B) This implies that heavy drinking causes people to smoke more. (C) We cannot conclude cause and effect, but this also implies that there is a high positive correlation between cigarette smoking and alcohol consumption for individuals. (D) This could be an example of a correlation caused by a common cause because both activities are highly correlated with average family income and average income varies widely among the provinces. (E) We cannot conclude cause and effect, but this also implies that the same individuals both smoke and consume liquor.
3) Suppose a study finds that the correlation coefficient relating family income to SAT scores is $r = +1$. Which of the following are proper conclusions?
I. Poverty causes low SAT scores.II. Wealth causes high SAT scores.III. There is a very strong association between family income and SAT scores.
(A) I only (B) II only (C) III only (D) I and II (E) I, II and III
4) An agricultural economist says that the correlation between corn prices and soybean prices is $r = 0.7$. This means that
(A) when corn prices are above average, soybean prices also tend to be above average.(B) there is almost no relation between corn prices and soybean prices.(C) when corn prices are above average, soybean prices tend to be below average.(D) when soybean prices go up by 1 dollar, corn prices go up by 70 cents.

(E) the economist is confused, because correlation makes no sense in this situation.

5) If data set A of (x, y) data has correlation r = 0.65, and a second data set B has correlation r = -0.65, then

- (A) the points in A fall closer to a linear pattern than the points in B.
- (B) the points in B fall closer to a linear pattern than the points in A.
- (C) A and B are similar in the extent to which they display a linear pattern.
- (D) you can't tell which data set displays a stronger linear pattern without seeing the scatterplots.
- (E) a mistake has been made—r cannot be negative.

THE END
